# Where AI visibility is leaking

| Pillar                                                                                                   | Performance            | %   |
|----------------------------------------------------------------------------------------------------------|------------------------|-----|
| <b>JS Rendering</b><br>Whether AI crawlers can read your pages without running JavaScript                | <div><div></div></div> | 30% |
| <b>Robots &amp; Crawl</b><br>Whether AI bots are allowed to reach and index your content                 | <div><div></div></div> | 88% |
| <b>Schema &amp; Entity</b><br>Whether your structured data tells AI what you sell and who you are        | <div><div></div></div> | 22% |
| <b>AI Discoverability</b><br>Whether AI agents can find dedicated information about how to use your site | <div><div></div></div> | 40% |

ADDITIONAL CHECKS · scored separately

|                                                                                      |                        |     |
|--------------------------------------------------------------------------------------|------------------------|-----|
| <b>Semantic Hierarchy</b><br>Whether your page structure makes sense to AI parsers   | <div><div></div></div> | 70% |
| <b>Security</b><br>Whether your site exposes anything that AI crawlers shouldn't see | <div><div></div></div> | 15% |

Overall score is a weighted average: Schema & Entity 35%, JS Rendering 25%, Robots & Crawl 25%, AI Discoverability 15%. Semantic Hierarchy and Security are scored separately.

|                                                                |                                                               |
|----------------------------------------------------------------|---------------------------------------------------------------|
| <b>STRONGEST PILLAR</b><br><br><b>Robots &amp; Crawl</b> — 88% | <b>PRIORITY FOCUS</b><br><br><b>Schema &amp; Entity</b> — 22% |
|----------------------------------------------------------------|---------------------------------------------------------------|

1 weighted pillar is healthy. Schema & Entity needs immediate attention.

## What's behind the score

### 1 AI sees a near-empty version of your site.

**What we found:** A large portion of your page content only appears after the browser runs scripts — the version AI crawlers receive is missing product descriptions, pricing, and key copy.

**Why it matters:** AI shopping agents and answer engines can't cite what they can't read, so your products and brand get skipped in favour of competitors whose content is visible.

### 2 AI has no structured data to understand your products.

**What we found:** Your pages don't expose the machine-readable metadata AI uses to identify what you sell.

**Why it matters:** Without that signal, AI systems can't reliably surface your products, prices, or brand in shopping queries — it's the difference between being found and being invisible.

### 3 Your brand has no official voice in AI training pipelines.

**What we found:** There's no dedicated page on your site telling AI agents who you are, what you sell, and how to talk about you.

**Why it matters:** When AI assembles its understanding of your brand, the narrative gets shaped by third parties — review sites, aggregators, competitors — instead of you.

### 4 AI can't verify who you are across the web.

**What we found:** Your site doesn't publish the verified external links AI uses to confirm an organisation's identity.

**Why it matters:** AI agents treat unverified brands as lower-confidence sources — your name gets cited less often, or skipped in favour of competitors AI can confirm.

### 5 A sensitive exposure was identified that warrants a private conversation.

**What we found:** Something in your site's exposed surface is sensitive enough that we'd rather not put it in writing.

**Why it matters:** We'd want to walk you through what we saw before suggesting how to handle it — both for your security and to avoid putting the detail in a document that may be forwarded.

## What AI readiness unlocks

### **Be cited when customers research your category**

Perplexity, ChatGPT, and Google AI Overviews now answer purchase-intent queries directly. Brands that aren't indexed by AI crawlers are invisible in that answer — ceding the research moment to competitors who are.

### **Surface in AI shopping agents**

A new layer of AI-powered comparison tools is being built on top of structured product data. Brands with clean, machine-readable product information are included automatically; those without are skipped entirely.

### **Own your brand entity before competitors do**

AI knowledge graphs are being assembled now, using publicly available structured data. Establishing your organisation's entity — with verified links across the web — sets the foundation for how AI describes your brand for years.

## Book a 45-min walkthrough

Your audit identified 4 findings — including 5 in Schema & Entity that we'd want to talk through carefully. A 45-minute walkthrough is the fastest way to get the priorities, the fixes, and the comparisons against others in your category.

### Reply to your Pattern contact

Hit reply on the email this PDF came with — share two or three times that work and we'll lock in a 45-minute walkthrough.
