AI Discoverability — 40%

Access Checker — Executive Summary

AI-generated analysis · Pattern Brain

Executive Summary

Your site scores 62% overall — a **C grade**. Core crawlability is strong but AI discoverability is holding you back.

Top 3 Quick Wins

- 1 Add an llm.txt file at the root of your domain. This is a 30-minute task that immediately signals AI readiness to crawlers like GPTBot and ClaudeBot.
- 2 Fix the /admin path exposure. HTTP 200 on an admin path is a critical security issue that needs to be resolved before any AI audit sharing.
- 3 Enable server-side rendering for product carousels. Your Next.js setup supports this natively — flip `getStaticProps` to `getServerSideProps` on the product listing template.

Schema Opportunities

Product schema completeness sits at 50%. Adding `aggregateRating` and `offers.availability` will unlock rich results in AI-powered search surfaces.

Content Structure

Blog content is well-structured with proper article schema and authorship signals. Replicate this pattern on product pages.

Per-Page Results

Per-pillar checks run on a representative page from each template — empty cells indicate the pillar wasn't audited on that page type. See the detailed analysis below for full results.

Page	URL	JS	Schema	Semantic
Homepage	https://example.com/	78	60	100
Product	https://example.com/products/widget	72	50	50
Blog	https://example.com/blog/post-1	85	70	100

Priority Recommendations

CRITICAL · SECURITY

1. Admin path /admin is returning HTTP 200 to AI crawlers. Restrict access immediately.

WARNING · AI DISCOVERABILITY

2. No llm.txt file found. Add one to signal AI readiness and describe your content to LLM crawlers.

WARNING · JS RENDERING

3. 57% of homepage content is hidden from crawlers. Enable SSR for product carousels.

RECOMMENDATION · SCHEMA

4. Product schema completeness is 50%. Add aggregateRating and offers.availability fields.

PART TWO

Detailed Analysis

Pillar-by-pillar breakdown of every check, every page, and every AI-bot crawl result that fed into the score above.

Page-level · Checked on each of your 3 pages

Homepage 78/100

Rendered via: Next.js

Content	HTML (Crawler)	JS (Browser)	Status
H1 tag	1	1	OK
Product images	0	12	MISSING
Nav links	3	8	MINOR GAP

CONTENT VISIBILITY

43% visible to AI crawlers

HTML: 4,200 chars · JS-rendered: 9,800 chars · Hidden: 5,600 chars

● Next.js (low) — SSR detected — most content server-rendered

AI ANALYSIS

The homepage loads ~57% of its content via JavaScript. AI crawlers fetching raw HTML will miss product carousels, dynamic navigation and pricing data.

- › Enable SSR or pre-rendering for key content blocks.
- › Ensure H1 and meta description are server-rendered.
- › Use Next.js getServerSideProps to surface product data.

Product 72/100

Rendered via: React

Blog 85/100

Robots & Crawlability

Site-level · Controls all crawler access

- robots.txt found · 1 sitemap(s) declared
- CSS/JS not blocked — AI agents can render pages

AI Bot Access (per robots.txt):

Bot	Company	Status
GPTBot	OpenAI	Allowed
ClaudeBot	Anthropic	Allowed
PerplexityBot	Perplexity	Blocked
Googlebot	Google	Allowed

AI ANALYSIS

- robots.txt is well-configured for most AI agents.
- › PerplexityBot is currently blocked — consider allowlisting.
 - › No CSS/JS blocking detected — good for rendering.
 - › Sitemaps are declared and should accelerate indexation.

Schema & Entity

Page-level · Checked on each of your 3 pages

Homepage 60/100

TYPES FOUND: [Organization](#), [WebSite](#)

- Essential found: Organization
- Essential missing: Product
- **Organization** — 85% complete
- **WebSite** — 60% complete · Missing: potentialAction
- Title (23 chars): Example — Great Widgets
- Meta description: 145 chars
- Canonical matches URL

Product 50/100

TYPES FOUND: [Product](#)

- Essential found: Product
- **Product** — 50% complete · Missing: aggregateRating, review, offers.availability
- Title (20 chars): Widget Pro — Example
- Meta description: 80 chars
- Canonical matches URL

Blog 70/100

TYPES FOUND: [Article](#), [BreadcrumbList](#)

- Essential found: Article
- **Article** — 75% complete · Missing: publisher
- Title (37 chars): 10 Ways to Use Widgets — Example Blog
- Meta description: 155 chars
- Canonical matches URL
- Author: Found
- Publication date: Found

AI Discoverability

Site-level · llm.txt files + AI Info Page

llm.txt Files:

- /llm.txt
- /llms.txt
- /llm-info.txt
- No llm.txt files found at any standard path

AI Info Page:

- No AI Info Page found at /ai-info, /llm-info or similar paths

Well-Known AI Files:

- /.well-known/ai-plugin.json (not found)

AI ANALYSIS

No llm.txt or AI Info Page found. This is a significant gap.

- › Create /llm.txt with a structured description of your product catalogue.
- › Add an /ai-info page and link it from the footer.
- › Register with OpenAI's plugin directory if applicable.

Semantic Hierarchy & Content Structure

Page-level · Heading structure, semantic HTML, meta directives

Homepage

- Heading hierarchy: Valid — no skipped levels
- Semantic elements: main:1, nav:2, footer:1, article:0
- meta robots: index, follow
- Text-to-HTML ratio: 18.6%

Product

- Heading hierarchy: Issues — skipped heading levels
- Semantic elements: main:1, nav:1
- Text-to-HTML ratio: 7.4%

Blog

- Heading hierarchy: Valid — no skipped levels
- Semantic elements: main:1, article:1, nav:1, aside:1
- meta robots: index, follow
- Text-to-HTML ratio: 37.8%

Security & Exposure

Site-level · Sensitive path probing as AI bots

Critical paths (admin/env/config):

- /admin — HTTP 200 (4,200 bytes)

Live Bot Crawl Results

2 allowed · 1 blocked · 3 total

Bot	Company	Status	HTTP	Load
GPTBot	OpenAI	Allowed	200	1.2s
ClaudeBot	Anthropic	Allowed	200	0.9s
Bingbot	Microsoft	BLOCKED	403	0.3s
