How discoverable is your brand to ChatGPT, Claude, and Perplexity?

Generated 11 May 2026

38%

Overall LLM Readiness

Grade D — Poor

A 85+

B 70+

C 50+

D 35+

F <35

Where AI visibility is leaking

Pillar	Performance	%
JS Rendering		30%
Robots & Crawl		88%
Schema & Entity		22%
AI Discoverability		40%

ADDITIONAL CHECKS · scored separately

Semantic Hierarchy		70%
Security		15%

Overall score is a weighted average: Schema & Entity 35%, JS Rendering 25%, Robots & Crawl 25%, AI Discoverability 15%. Semantic Hierarchy and Security are scored separately.

STRONGEST PILLAR

Robots & Crawl — 88%

PRIORITY FOCUS

Schema & Entity — 22%

1 weighted pillar is healthy. Schema & Entity needs immediate attention.

What's behind the score

1 AI sees a near-empty version of your site.

A large portion of your page content only appears after JavaScript executes. AI crawlers receive a stripped-down page — missing product descriptions, pricing, and the copy that should drive citations.

2 AI has no structured data to understand your products.

Without machine-readable metadata, AI systems can't reliably surface your product details, pricing, or brand in shopping queries. It's the difference between being found and being invisible.

3 Your brand has no official voice in AI training pipelines.

When AI systems assemble their understanding of your brand, they use whatever public content they can find. Without a designated guidance page, that narrative is shaped by third parties — review sites, aggregators, competitors.

4 AI can't verify who you are across the web.

Your organisation's structured data doesn't include links to your verified profiles on social platforms or authoritative directories. Without these, AI knowledge graphs treat you as an unverified entity — reducing citation confidence.

5 A sensitive exposure was identified that warrants a private conversation.

We've withheld the specifics — they're better discussed live.

What AI readiness unlocks

Be cited when customers research your category

Perplexity, ChatGPT, and Google AI Overviews now answer purchase-intent queries directly. Brands that aren't indexed by AI crawlers are invisible in that answer — ceding the research moment to competitors who are.

Surface in AI shopping agents

A new layer of AI-powered comparison tools is being built on top of structured product data. Brands with clean, machine-readable product information are included automatically; those without are skipped entirely.

Own your brand entity before competitors do

AI knowledge graphs are being assembled now, using publicly available structured data. Establishing your organisation's entity — with verified links across the web — sets the foundation for how AI describes your brand for years.

Book a 45-min walkthrough

Your audit identified 4 findings — including 5 in Schema & Entity that we'd want to talk through carefully. A 45-minute walkthrough is the fastest way to get the priorities, the fixes, and the comparisons against others in your category.
